

VPAT™

Voluntary Product Accessibility Template®

Version 1.3

The purpose of the **Voluntary Product Accessibility Template**, or **VPAT™**, is to assist Federal contracting officials and other buyers in making preliminary assessments regarding the availability of commercial “Electronic and Information Technology” products and services with features that support accessibility. It is assumed and recommended that offerers will provide additional contact information to facilitate more detailed inquiries.

The first table of the Template provides a summary view of the Section 508 Standards. The subsequent tables provide more detailed views of each subsection. There are three columns in each table. Column one of the Summary Table describes the subsections of subparts B and C of the Standards. The second column describes the supporting features of the product or refers you to the corresponding detailed table, e.g., “equivalent facilitation.” The third column contains any additional remarks and explanations regarding the product. In the subsequent tables, the first column contains the lettered paragraphs of the subsections. The second column describes the supporting features of the product with regard to that paragraph. The third column contains any additional remarks and explanations regarding the product.

This VPAT is provided for informational purposes, and while efforts have been made to ensure accuracy, errors may occur. It is not a guarantee or warranty, and the creators disclaim any liability for direct or indirect damages related to the use or reliance on the information herein. Users are advised to independently verify details and consult relevant documentation, recognizing the inherent risks of potential inaccuracies. Any references to products or services are for illustrative purposes only, and users should conduct their own assessments.

Date: October 2024
Name of Product: combit List & Label 30 (Web Report Designer & Web Report Viewer)

Summary Table

Criteria	Supporting Features	Remarks and Explanations
Section 1194.21 Software Applications and Operating Systems	Supported. Details see below.	
Section 1194.22 Web-based Internet Information and Applications	Supported. Details see below.	
Section 1194.23 Telecommunications Products	Not Applicable	List & Label is not a telecommunications product.
Section 1194.24 Video and Multi-media Products	Not Applicable	List & Label has no multimedia features.
Section 1194.25 Self-Contained, Closed Products	Not Applicable	List & Label is not self-contained.
Section 1194.26 Desktop and Portable Computers	Not Applicable	List & Label is software according to section 1194.21.
Section 1194.31 Functional Performance Criteria	Supported. Details see below.	
Section 1194.41 Information, Documentation and Support	Supported. Details see below.	

Section 1194.21 Software Applications and Operating Systems – Detail

Criteria	Supporting Features	Remarks and Explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Fully Supported	Keyboard access is available everywhere in the List & Label Web Report Designer and Web Report Viewer. All Microsoft Windows accessibility features are supported.
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Fully Supported	No accessibility features are disrupted or disabled.
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Fully Supported	The current focus is clearly visible at all times using standard mechanisms of the browser UI. The current focus and any focus changes can be tracked by assistive technology.
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Fully Supported	The Web Report Designer and Web Report Viewer use standard ARIA descriptions for all UI elements.
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	Fully Supported	All images are used consistently.
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	Fully Supported	All textual information is provided through operating system functions. Text content, caret position and text attributes are available.

(g) Applications shall not override user selected contrast and color selections and other individual display attributes.	Fully Supported	System wide color and contrast settings are honored. Custom settings are not overridden.
(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	Fully Supported	All animation features are optional and non-critical to the functionality.
(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Fully Supported	Color coding is not used to convey information for any other purpose than selection. Selection uses the standard UI.
(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	Fully Supported	Color and contrast settings are not changed.
(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	Fully Supported	Flashing or blinking text is not used throughout the product.
(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Fully Supported	No electronic forms are used.

Section 1194.22 Web-based Internet information and applications – Detail

Criteria	Supporting Features	Remarks and Explanations
(a) A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).	Fully Supported	All non-text elements have tooltips and "alt" text equivalents.
(b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.	Not Applicable	
(c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.	Fully Supported	Color is not used to convey information other than selection.
(d) Documents shall be organized so they are readable without requiring an associated style sheet.	Not Applicable	Readable documents are not part of the UI.
(e) Redundant text links shall be provided for each active region of a server-side image map.	Not Applicable	Image maps are not used in the product.
(f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.	Not Applicable	Image maps are not used in the product.
(g) Row and column headers shall be identified for data tables.	Fully Supported	Where tables are used in the UI, row and column headers are identified as such.
(h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.	Fully Supported	Where tables with two or more logical levels of row or column headers are used in the UI, corresponding markup is used.
(i) Frames shall be titled with text that facilitates frame identification and navigation.	Fully Supported	
(j) Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.	Not Applicable	No flickering elements are used throughout the product.

<p>(k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.</p>	<p>Not Applicable</p>	<p>The product is not a web site.</p>
<p>(l) When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.</p>	<p>Fully Supported</p>	<p>All dynamically created controls are properly using attributes to support the usage of assistive technology.</p>
<p>(m) When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).</p>	<p>Not Applicable</p>	
<p>(n) When electronic forms are designed to be completed on-line, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.</p>	<p>Fully Supported</p>	<p>Where form elements are used, the product uses standard browser controls which fully comply with assistive technology.</p>
<p>(o) A method shall be provided that permits users to skip repetitive navigation links.</p>	<p>Fully Supported</p>	<p>The product does not use repetitive navigation links.</p>
<p>(p) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.</p>	<p>Not Applicable</p>	<p>No timed responses are used throughout the product. Error messages may pop up and close within reasonable time.</p>

Note to 1194.22: The Board interprets paragraphs (a) through (k) of this section as consistent with the following priority 1 Checkpoints of the Web Content Accessibility Guidelines 1.0 (WCAG 1.0) (May 5 1999) published by the Web Accessibility Initiative of the World Wide Web Consortium: Paragraph (a) - 1.1, (b) - 1.4, (c) - 2.1, (d) - 6.1, (e) - 1.2, (f) - 9.1, (g) - 5.1, (h) - 5.2, (i) - 12.1, (j) - 7.1, (k) - 11.4.

Section 1194.31 Functional Performance Criteria – Detail

Criteria	Supporting Features	Remarks and Explanations
(a) At least one mode of operation and information retrieval that does not require user vision shall be provided, or support for Assistive Technology used by people who are blind or visually impaired shall be provided.	Fully Supported	The product uses standard browser controls and ARIA attributes for all UI elements. It supports assistive technology wherever possible.
(b) At least one mode of operation and information retrieval that does not require visual acuity greater than 20/70 shall be provided in audio and enlarged print output working together or independently, or support for Assistive Technology used by people who are visually impaired shall be provided.	Fully Supported	Screen readers can be used throughout the product. The operation system's magnifying features are supported.
(c) At least one mode of operation and information retrieval that does not require user hearing shall be provided, or support for Assistive Technology used by people who are deaf or hard of hearing shall be provided.	Not Applicable	The product does not require hearing to access its functionality.
(d) Where audio information is important for the use of a product, at least one mode of operation and information retrieval shall be provided in an enhanced auditory fashion, or support for assistive hearing devices shall be provided.	Not Applicable	The product does not require hearing to access its functionality.
(e) At least one mode of operation and information retrieval that does not require user speech shall be provided, or support for Assistive Technology used by people with disabilities shall be provided.	Not Applicable	The product does not require speech recognition to access its functionality.
(f) At least one mode of operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength shall be provided.	Fully Supported	All assistive keyboard features of the operating system are supported through standard means.

Section 1194.41 Information, Documentation and Support – Detail

Criteria	Supporting Features	Remarks and Explanations
(a) Product support documentation provided to end-users shall be made available in alternate formats upon request, at no additional charge.	Fully Supported	combit offers documentation in a variety of formats including standardized HTML and PDF form.
(b) End-users shall have access to a description of the accessibility and compatibility features of products in alternate formats or alternate methods upon request, at no additional charge.	Fully Supported	Information on the accessibility features is provided by phone or in standardized HTML and PDF form.
(c) Support services for products shall accommodate the communication needs of end-users with disabilities.	Fully Supported	Support can be reached via phone or electronic communication.
